This student welfare web based django application is basically made to serve student daily activity purposes. In this software we have three four types of users.

Admin:

- Can add courses in the tool
- Can check the student enrollments, grades, attendance
- Make site related announcements
- Manage other users accessing from the applications
- Can accept student requests for services like certificate provision, leave requests etc.

Student:

- Know the courses enrolled, attendance and the grade
- Check the announcements made by librarian
- Request admin for certificate provisions and other services.
- Order book from library

Librarian:

- Add new books which students can access
- Email Alerts to inform students
- Accept / Reject student book requests
- Make Announcements to students

Faculty:

- Enroll students to the course he teach
- Update their attendance and grade with a single click
- Know the courses he teach
- Make announcements to students

Other Features:

- Password Change via OTP
- Language swap. Support millions of languages(Credits: Google Translator)

Speciality:

Light weight application

Data safe. Student can only access his dashboard

Future Plans:

- Notes Sharing by faculty
- Involving Mess activities
- Updating user attendance and grade by single click by uploading an excel document.
